Summary

Full-stack developer with a deep interest in AI/ML — particularly reinforcement learning and intelligent systems. I build scalable web applications and have hands-on experience designing custom RL environments for agent-based simulation and model training. Proficient in Python, modern ML frameworks, and end-to-end system design, I focus on bridging the gap between intelligent backends and polished frontend experiences. I write clean, efficient code and care about one thing above all: using AI to solve problems that actually matter.

Education

Ramaiah University of Applied Sciences, B.Tech in Computer Science Expected 2027

Coursework: Computer Architecture, Comparison of Learning Algorithms, Computational Theory

College of Basic Science and Humanities, Bhubaneswar, 12th 2021 – 2023

Coursework: PCM IT

Khaira Govt. High School Khaira, Balasore, 10th 2021

Experience

Frontend Developer Intern – AICTE Virtual Internship (Remote) May 2024 – July 2024

Built responsive web interfaces using **HTML**, **CSS**, and **JavaScript**. Enhanced performance via **API integration** and optimized UI/UX using **vibe coding techniques**.

Java Developer Intern – CTTC, Bhubaneswar July 2025 – Aug 2025

Worked on **Core Java** applications focusing on **OOP concepts** and **database connectivity**, improving backend programming proficiency.

Projects

DineSmart – QR-Based Restaurant Ordering System April 2026 – Present

Engineered a full-stack contactless ordering platform where customers scan **QR codes** to browse menus and place orders in real time. Built **admin and operator dashboards** for live order tracking and menu control, and exposed **RESTful APIs** to handle concurrent requests with low latency.

RL Mini Game Environment April 2026

Built a custom **reinforcement learning environment** from scratch to simulate agent-environment interactions in a game setting. Defined a structured **state space**, **action space**, and **shaped reward function**, with a **modular architecture** supporting experimentation with algorithms like Q-Learning and policy gradients.

AI-Based Picture Text Mining & Translation System March 2026 – Present

Built a dual-platform application (**Flask web app** + **Tkinter desktop app**) that extracts and translates text from images using a **7-stage automated pipeline**. Implemented **multi-engine OCR** (**Tesseract**, **EasyOCR**, **PaddleOCR**, **Doctr**) with AI-based post-processing and multilingual translation support.

Technologies

Languages: Python, C, C++, Java, JavaScript, HTML, CSS, SQL

Frameworks & Tools: FastAPI, React, Flask, Node.js (Basic), Tailwind CSS, Bootstrap, Git, GitHub, Vercel, Docker

Databases: PostgreSQL, MySQL, SQLite, MongoDB, Supabase

AI/ML: PyTorch, NumPy, Reinforcement Learning (Custom Environments), Gymnasium, Stable-Baselines3

Backend & Systems: REST APIs, JWT Authentication, WebSockets

APIs & Integrations: Razorpay API, Google Maps API
